THE O'DONNELL GROUP
INDUSTRIAL REAL ESTATE SINCE 1972

A $100,000,000 Industrial Fund at a Generational Buying Window

$100M of equity for infill industrial in the $15–$35M range across the highest-demand U.S. corridors — into a supply collapse and $220B+ of maturing debt.

WHY TOG
Proven Sponsor

- Three-generation, vertically integrated industrial sponsor.
- 96 projects across 38 cities; 24.25M SF acquired or developed since 1972.
- Property-level returns since 1996: 50% gross IRR, 3.0× equity.

WHY INDUSTRIAL
Exceptional Asset Class

- Infill industrial is critical, supply-constrained infrastructure.
- 10.4% annual unlevered returns over the past 20 years.
- Industrial NOI growth is forecast to lead every other CRE asset class through 2029.

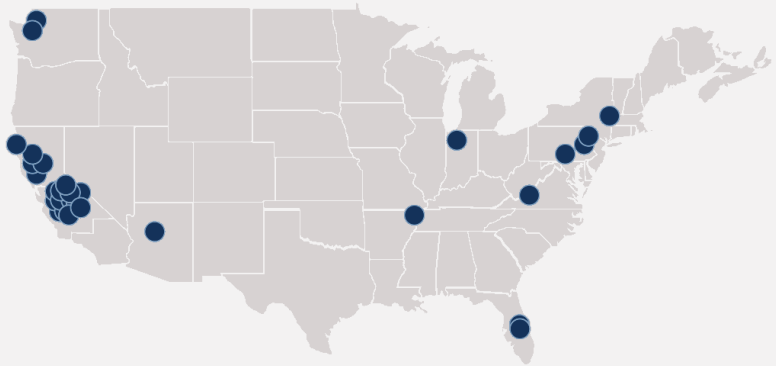

WHY NOW
Historic Window

- E-Commerce — Growing at 8% per year.
- AI and Automation — Increase industrial demand.
- Reshoring $5T committed.
- Distressed Debt $220B maturing (43% of total).
- Historically High Rates — 4.86% ten-year vs. 1.32% 5 years ago
- Lowest New Industrial Building Deliveries Since 2014

Sources: Green Street Industrial Annual Sector Outlook, Jan 2026; TOG investment history since 1996. Gross property-level returns, before fund-level fees and carry.

Infill Industrial: Everything Goes Through a Warehouse.

> "In the private market, industrial has turned in above-average returns equaling 10.4% per annum over the past 20 years.
>
> — Green Street Advisors

Infill is critical last-mile infrastructure

Infill warehouses and distribution centers sit close to dense urban centers — the physical precondition for same-day and next-day delivery. The location is the product.

Structurally supply-constrained

- Municipalities discourage new infill development through zoning, regulation and aesthetic concerns.
- Land is scarce, construction is expensive, and new supply is structurally constrained.

Resilient, sticky cash flow

- Tenants need infill for last-mile delivery and invest in space-specific racking, fit-out and operations. Moving is expensive.
- Infill vacancy is tight, so alternatives are limited and renewals are the path of least resistance.

Strict Acquisition Criteria

1. BASIS

Below replacement cost, with below-market in-place rents that mark to market at renewal.

2. LOCATION

Infill, with proximity to a dense population base and to ports and transportation infrastructure.

3. CONDITION

Properties in need of repositioning — poorly managed, deferred maintenance, or vacant with excellent leasing potential.

4. SOURCING

Off-market deals with upside through cash flow, value appreciation, or both.

Why Now?

1. DISTRESSED DEBT

Loans written in a 1–3% world are maturing into a 4.5%+ world. Owners must recapitalize or sell — and most infill owners are small and fragmented.

$220B

Industrial debt coming due in '25 and '26 — 43% of all industrial debt outstanding.

20 – 50%

Average paydown required at refinancing to hold DSCR and LTV covenants. Many owners will sell instead.

2. HISTORICALLY HIGH RATES

Rates sit well above their ten-year average, which is precisely what suppresses competing bidders and resets pricing in the buyer's favor.

1.32% → 4.86%

Ten-year Treasury five years ago versus today, against a 3.04% ten-year average.

+100 bps

Every 100 bps of cap-rate compression from here lifts levered returns materially. We underwrite no compression.

3. LOWEST DELIVERIES SINCE 2014

New supply has collapsed while demand compounds. Nothing delivered in 2027 or 2028 can be started fast enough to close the gap.

↓ 70%

Reduction in new industrial inventory versus the 2023 peak.

1%

Of the industrial base set to deliver in 2026, against a 7% national vacancy rate now past its peak.

Sources: Green Street Industrial Outlook 2026; Bloomberg Economics; JLL; Cushman & Wakefield; CoStar. Third-party estimates and forecasts, not TOG projections, and not guarantees.

Modern Day Demand Factors

The following causes will greatly increase industrial demand in the next five years and beyond.

1. E-COMMERCE

Still only ~16% of total retail sales — the runway remains, and coastal infill captures the supply-chain spillover.

3×

Warehouse space required per dollar of e-commerce sales versus brick-and-mortar.

20%

Of 2025 U.S. industrial net absorption came from Amazon alone.

2. AI & AUTOMATION

Just-in-time logistics and robotics need modern clear-height buildings, widening the gap between Class A and legacy infill.

$34B

AI-in-manufacturing market by 2030 — a 42% CAGR (TBRC).

Δ

Older infill assets trade at discounts — TOG's value-add lane.

3. RESHORING

Committed capital is already landing in specific submarkets; industrial demand follows the manufacturing investment with a lag.

$5T

Pledged to reshore U.S. manufacturing over the next ten years.

5 B

SF of new industrial demand from $5T reshored 9M SF in Phoenix alone.

The industrial base will need to increase by **28% in order to accommodate reshoring** commitments over the next ten years.

Sources: Green Street Industrial Outlook 2026; Bloomberg Economics; JLL; Cushman & Wakefield; TBRC; The Reshoring Initiative. Third-party forecasts, not TOG projections.

Leadership

Douglas O'Donnell

FOUNDER & CHIEF EXECUTIVE OFFICER

He began his career in industrial brokerage at Insignia Commercial Group in 1992, then began his development career at The O'Donnell Group in 1996. The O'Donnell Group is a vertically integrated, three-generation sponsor of value-add infill industrial — sourcing, underwriting, leasing, and management. Since 1996, the firm has made 26 investments, 23 realized, at a 50% average gross realized IRR and a 3.0× average equity multiple.

EDUCATION

University of Southern California — MBA; Master of Real Estate Development; undergraduate degree in International Relations. Harvard University Graduate School of Design — Certificate, Advanced Management Development Program in Real Estate.

Oliver O'Donnell

PRESIDENT

President of The O'Donnell Group. Joined in 2021 as Vice President for Acquisitions and Asset Management, sourcing and underwriting new opportunities and implementing the company's business plans. Previously at Pacific Star Capital, developing commercial projects for national tenants including Whole Foods Market, Target, and Tesla.

EDUCATION

The Wharton School, University of Pennsylvania — MBA. Columbia University — Master's degree in Real Estate Development. University of Miami — Bachelor's degree in Finance and Legal Studies.

Key Team

Shahab Taleghani

CHIEF FINANCIAL OFFICER

Chief Financial Officer of The O'Donnell Group. With the firm since 2001, he oversees its finances, accounting, investor reporting, and fund administration from the Newport Beach office.

EDUCATION

University of San Francisco — B.S. Business Administration, Accounting (1982). South Trafford College, England — Advanced Level, Accounting and Mathematics (1978).

PRIOR EXPERIENCE

Trammell Crow Co. — Corporate Controller. CaliforniaMart (Equitable Life / AXA) — Controller. Compass / Jones Lang LaSalle — Controller. Earlier: Brinderson Corp., Ferguson Partners.

Kate Dahl

PROPERTY MANAGER & ACCOUNTANT

Property Manager and Accountant. She manages the firm's industrial portfolio and oversees property-level accounting from the Newport Beach office. Kate is the firm's point of contact for investors investing offline.

EDUCATION

Azad University, Tehran — Bachelor's. Iran Accounting Association — Certificate in Accounting. Irvine Valley College — QuickBooks.

PRIOR EXPERIENCE

The O'Donnell Group — Accounting Assistant (2021); Commercial Property Manager (2023). Previously: Dizandad International Fair Organization, Tehran.

te performance that can be expected from future investments.

52 Locke

SWEDESBORO, NJ · 207,500 SF ON 12 ACRES

PROPERTY IRR	EQUITY MULTIPLE	HOLD PERIOD
50%	2.8×	1.25 yrs

TOG acquired 52 Locke in 2020 from an owner-user for $11.65MM and sold the property in 2022 to an institutional investment manager for $26.5MM.

Value creation. TOG executed a short-term leaseback with the owner-user while investing capital in roof upgrades, environmental remediation, new dock doors and levelers, paint, and MEP upgrades.

TOG then secured a new seven-year lease from a regional distribution tenant to occupy the entire building, and sold the property as a stabilized investment sale.

201 Elizabeth

BORDENTOWN, NJ · 275,631 SF ON 39 ACRES

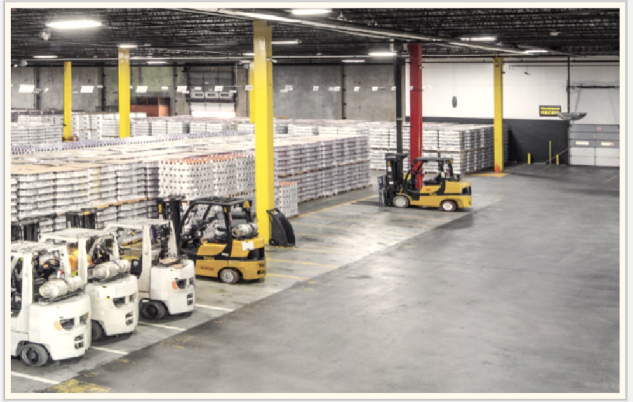

PROPERTY IRR	EQUITY MULTIPLE	HOLD PERIOD
44%	7.0×	5.4 yrs

TOG acquired 201 Elizabeth in 2016 from a private investor for $17.5MM and sold the property in 2022 to an institutional investment manager for $60MM.

Value creation. The property was acquired with BAI Drinks (NASDAQ: KDP) in place at rents less than half the market rate, alongside a landlord option to terminate the lease.

TOG secured land-use entitlement approvals to expand the building by an additional 140,767 SF and invested in an electric power station, then elected to terminate the lease and sell the building vacant.

4310 Stout Field

INDIANAPOLIS, IN · 263,230 SF ON 13.49 ACRES

PROPERTY IRR	EQUITY MULTIPLE	HOLD PERIOD
24%	2.9×	5.4 yrs

In 2019 TOG bought 4310 Stout Field for $8.65MM from an owner-user, and sold the project to a private equity firm for $15.75MM.

Value creation. TOG structured a sale-leaseback with a seven-year term, achieving 10% cash-on-cash through the hold period in addition to significant appreciation.

Capital improvements comprised a partial roof replacement, MEP upgrades, new dock-door equipment and parking-lot improvements.

North Dade Portfolio

OPA-LOCKA, FL · THREE WAREHOUSES, 142,415 SF ON 6.30 ACRES

PROPERTY IRR	EQUITY MULTIPLE	HOLD PERIOD
17%	1.3×	1.6 yrs

TOG acquired the North Dade Portfolio from a private owner in 2022 for $17.1MM and sold the project in 2023 to an institutional investment manager for $24.65MM.

Value creation. The portfolio was acquired at 40% occupancy with $350K of NOI, and leased up within one year to 100% occupancy across four tenants with $1.5MM of NOI.

During the lease-up TOG invested $2MM of capital expenditure to retrofit the warehouses.

Appendix 2

The infill industrial asset class: the least replaceable slice of commercial real estate, and why it is owned privately rather than through REITs.

O'DONNELL GROUP
INDUSTRIAL REAL ESTATE SINCE 1972

U.S. Industrial Market

Q2 2026 · NATIONAL SNAPSHOT

THE BIG PICTURE

After three years of digesting a record construction wave, the market turned in Q2 2026: demand outpaced new deliveries for the first time in about four years, and vacancy fell at every major research firm. Leasing is running well ahead of last year, the pipeline under construction has fallen by more than half from its 2022 peak, and completions are at their lowest in a decade — full-year 2026 deliveries are the lowest since 2014. That is the backdrop for infill: when new supply stops arriving, tenants turn to the buildings already where they need to be.

TOTAL MARKET SIZE

18.3B SF

VACANCY RATE

6.5%

NET ABSORPTION

85.1M SF

Sources: CBRE, Q2 2026 U.S. Industrial & Logistics; Cushman & Wakefield, U.S. Industrial MarketBeat, Q2 2026; Green Street, Industrial Annual Sector Outlook, Jan 2026. Firms measure inventory differently — figures are not directly comparable across firms. Third-party data, not TOG projections.

The Most Defensible Slice of Commercial Real Estate

Irreplaceable locations

Critical proximity to dense urban populations, seaports and airports — the geography of last-mile delivery, and the one input that cannot be manufactured.

Sticky infrastructure

Warehousing is roughly 4–6% of an occupier's logistics cost — too operationally embedded to relocate. Tenants stay, and vacancy stays tight.

Structurally constrained

Municipalities limit new infill development through zoning, aesthetics and regulation. Land is scarce and construction is expensive.

14%

Industrial cap-ex as a share of NOI — the lowest of any major property type (office 29%, strip 22%, mall 17%).

23%

Industrial's share of total CRE value today, up from 15% post-GFC.

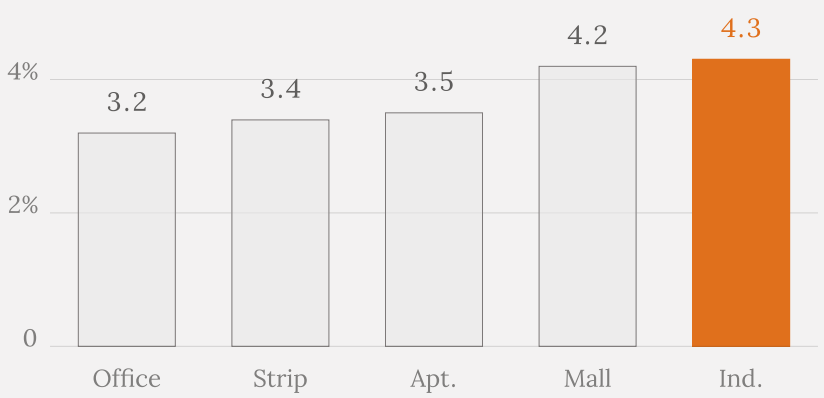

+40%

Industrial values over the last five years, with #2 long-term unlevered returns of any major property type.

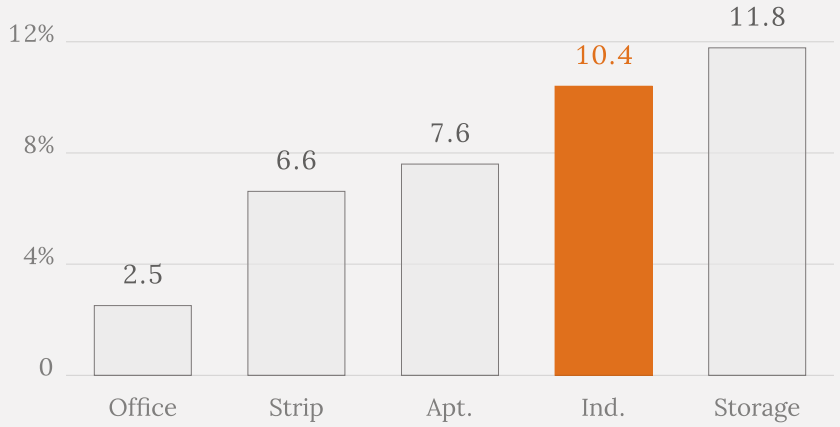

Sources: Green Street Industrial Outlook 2026; Bloomberg Economics; JLL; Cushman & Wakefield.

Industrial Leads on the Metrics That Matter

Same-store NOI growth
2026–2029 CAGR

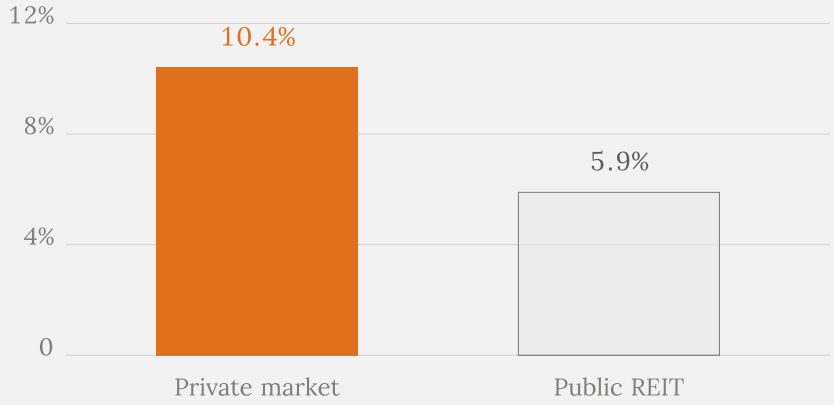

20-year unlevered
private-market returns

"CRE lenders have materially shifted their portfolios toward apartment and industrial loans — while reducing exposure to retail and office." Source: Green Street Industrial Annual Sector Outlook, Jan 2026; 20-year returns from the Green Street private-market unlevered total return series.

Why Private Ownership, Not REIT Exposure

INDUSTRIAL · 20-YEAR ANNUALIZED TOTAL RETURN

STRUCTURAL ADVANTAGE DURING DISRUPTION

- During the financial crisis of '08–'09, major industrial REITs were heavily leveraged with significant development exposure.
- When credit markets froze, REITs were forced to issue deeply dilutive equity — destroying NAV and long-term value.
- Private owners could simply hold through the duration of the crisis. That is a structural advantage, not a market call.

Green Street's private-market total return is the change in CPRI (income plus capital-value change); CPRI data through 4Q25. Public-market returns from FTSE/NAREIT indices. Past performance is no guarantee of future results.

Industrial Benefits Whether Rates Rise or Fall

01

NNN leases pass through

Tenants pay increases in property taxes, insurance and operating expenses, so inflation in the cost base does not compress owner margin.

02

Replacement cost rises

Building replacement costs increase with inflation, making it more expensive to add supply — which protects in-place assets acquired below replacement cost.

03

Rents follow

Constrained supply plus rising replacement cost pushes market rents up, and mark-to-market on below-market leases is realized at each renewal.

While industrial real estate is resilient in changing interest rate environments, the oversupply of industrial real estate decreases the value. This is why invest in infill markets as there is a dearth of land for new development.

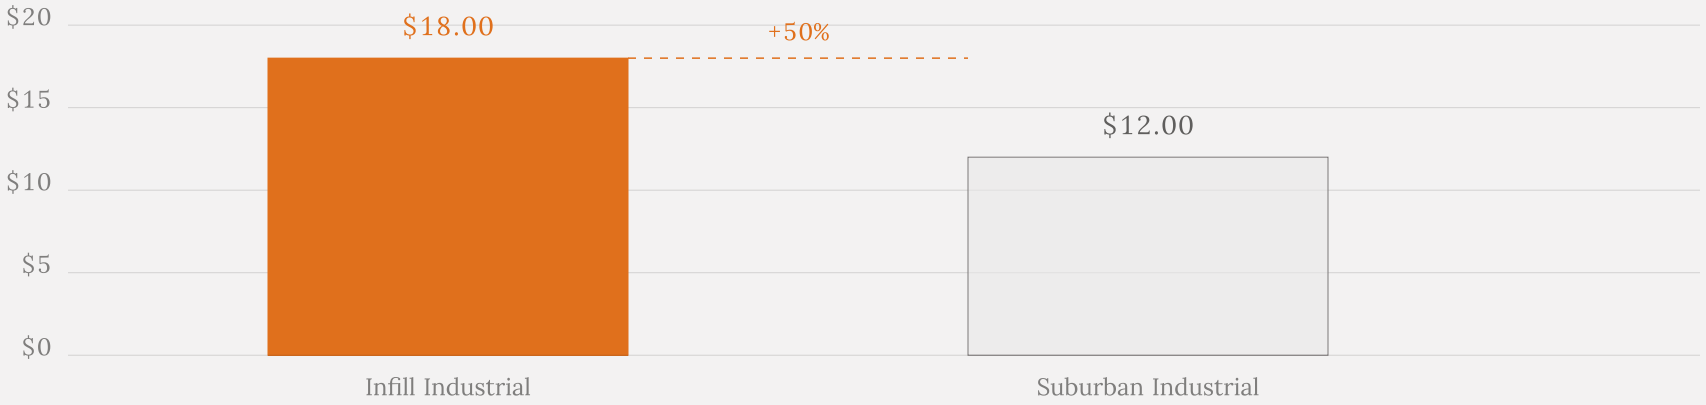

4.86%

Current 10-year rate — the basis reset that creates the entry point

Infill Commands a Rent Premium

AVERAGE ASKING RENT, $/SF NNN

Infill industrial assets command significant rent premiums due to proximity to labor, population density, ports and transportation infrastructure.

Illustrative market rents for comparable infill and suburban distribution product. Actual rents vary materially by market, building specification and lease structure.

Infill Industrial Strategy — Overview

A highly disciplined strategy, refined over 54 years and applied without variation.

TARGET

Undervalued infill

Industrial properties between $15MM and $35MM in low-vacancy, dense infill locations, with proximity to seaports and airports.

CAPITALIZE

Below replacement cost

On assets with mark-to-market leasing, a basis below replacement cost, and identifiable strategic capital improvements.

OPERATE & MANAGE

Vertically integrated

Leveraging in-house operations and rigorous hands-on management of the full deal lifecycle — construction, leasing, property management and accounting.

The $15–$35M Sweet Spot

Too small for institutions, too large for 1031 buyers — a fragmented market with motivated, often unsophisticated sellers.

BELOW $15M

1031 & retail buyers

Price-insensitive exchange capital competing on timing rather than underwriting. Bid dynamics compress returns.

$15M – $35M

The TOG lane

Large enough to require institutional execution, small enough that institutional funds cannot deploy meaningfully into it. Sellers are owner-operators.

50% / 3.0×

TOG gross property-level IRR and equity multiple in this range since 1996.

$50M+

Institutional investors

Efficiently priced, broadly marketed, and competitively bid by the largest allocators in the market.

Sources: Green Street Industrial Annual Sector Outlook, Jan 2026 (risk-adjusted IRR by submarket); TOG investment history since 1996. Property-level gross returns shown before fund-level fees, carry and expenses. Past performance does not guarantee future results.

A3

Appendix 3

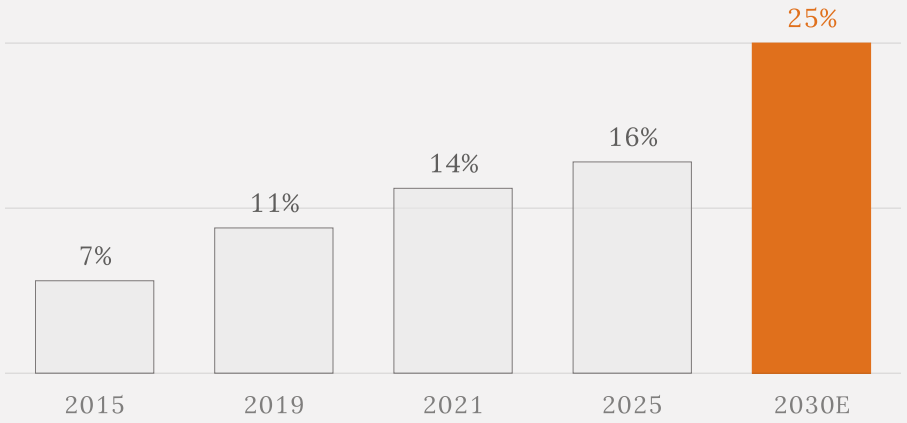

One page for each of the six factors, in order — the demand engines, then the supply and capital squeeze that creates the sellers.

E-Commerce Still Has Its Runway

01 E-COMMERCE

Online sales are still only a sixth of U.S. retail, and each dollar that moves online needs three times the warehouse space.

- **The runway is the point.** 16% to 25% of retail by 2030 means hundreds of millions of new SF.
- **Infill captures it.** Same-day delivery is served from inside the population, not the metro edge.
- **The tenants are the covenants.** Amazon alone took a fifth of 2025 net absorption.

3×

Warehouse space required per dollar of e-commerce sales versus brick-and-mortar.

20%

Of 2025 U.S. industrial net absorption came from Amazon alone.

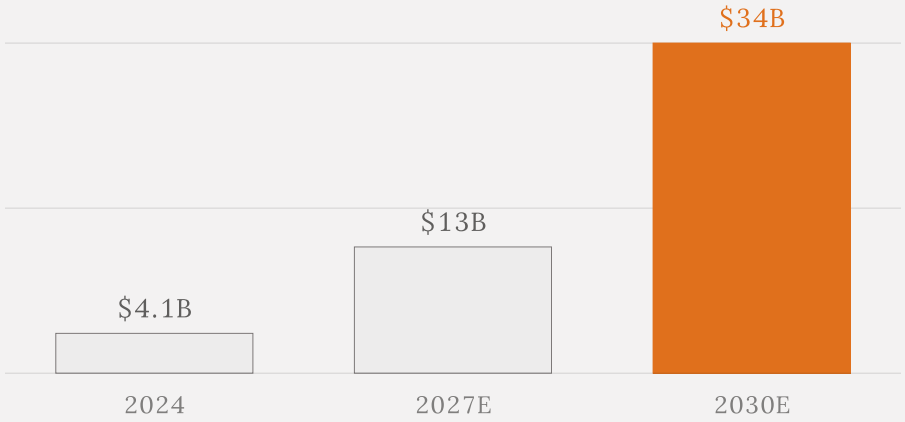

Sources: U.S. Census Bureau; Green Street Industrial Annual Sector Outlook, Jan 2026; CBRE. The 2030 share is a third-party projection, not a TOG forecast.

Automation Reprices Industrial Space

02 AI AND AUTOMATION

Robotics and just-in-time logistics demand power and clear height that legacy buildings do not have — widening the Class A spread.

- **The spec has moved.** Automation needs 36'+ clear and heavy power; pre-2000 infill has 22–28'.
- **That spread is the entry point.** Legacy infill trades below its own replacement cost as a result.
- **Capex is the strategy.** Roof, dock and power upgrades make it institutional at a value-add basis.

42%

CAGR of the AI-in-manufacturing market to 2030 (TBRC).

36'+

Clear height now specified for automated fulfilment, against 22–28' in pre-2000 infill stock.

Sources: The Business Research Company; JLL and Cushman & Wakefield specification surveys; TOG underwriting. 2027 and 2030 market sizes are third-party projections.

Reshoring Is Committed Capital, Not a Forecast

03 RESHORING

Roughly $5 trillion is pledged to U.S. manufacturing. Industrial demand follows it with a lag, into the supplier ring around each plant.

- **The multiplier is known.** We assume ~1B SF per $1T reshored — ~5B SF on $5T in pledges.
- **It clusters.** Phoenix alone drew ~9M SF of supplier commitments after TSMC, Intel and LG.
- **It is announced, not speculative** — sited, permitted, in many cases under construction.

ANCHOR INVESTMENT	MARKET	ANNOUNCED
TSMC	Phoenix, AZ	$265B
Micron	Clay, NY	$100B
Samsung	Taylor, TX	$45B
Intel	New Albany, OH	$28B
Hyundai	Savannah, GA	$7.6B

$5T

Pledged to reshore U.S. manufacturing capacity over the next ten years.

5 B

SF of new industrial demand from $5T reshored.

Sources: The Reshoring Initiative; JLL; Cushman & Wakefield; company announcements. Announced figures are total committed capital, phased over many years and subject to change.

Maturing Debt Creates the Sellers

04 DISTRESSED DEBT

Loans written in a 1–3% world are maturing into a 4.5%+ world. Owners must recapitalize or sell — and most infill owners are small.

- **The paydown is the problem.** Covenants take 20–50% of the loan in fresh equity.
- **Fragmentation makes it addressable.** One- and two-building owners; certainty of close wins.
- **We do not need distress.** Every deal is underwritten to in-place cash flow.

$220B
Industrial debt coming due across 2025 and 2026.

43%
Of all industrial debt outstanding — maturing inside two years.

20–50%
Average paydown required at refinancing to hold DSCR and LTV covenants.

1–3% → 4.5%+
The rate the debt was written at, against the rate it must be refinanced at.

Sources: Green Street Industrial Annual Sector Outlook, Jan 2026; Bloomberg Economics; MSCI Real Assets; TOG market observation. Estimates and market averages, not guarantees.

Industrial Benefits From Rates Going Up and Down

Ten-year U.S. Treasury yield, monthly, January 2008 – August 2026. Rates sit above every trailing average shown — which is precisely what suppresses competing bidders and resets pricing in the buyer's favor.

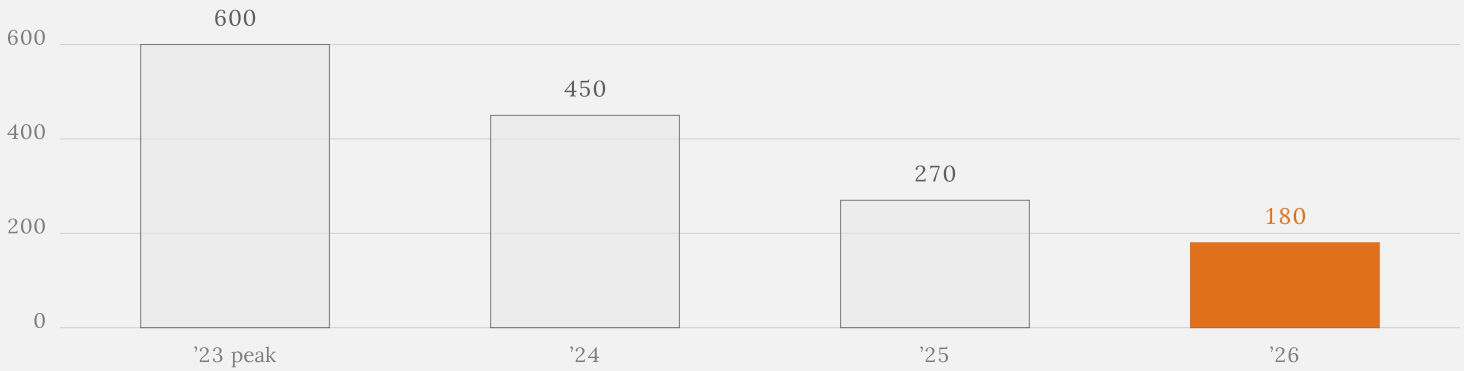

~4.66%

Aproximate Average Ten-year Treasury Rate in 2026.

5-year average	3.86%
10-year average	3.04%
15-year average	2.68%
20-year average	2.9%

Source: Federal Reserve H.15, ten-year Treasury constant maturity, monthly. Industrial hedges both directions: NNN leases pass through operating expenses, rising replacement costs constrain new supply, and rents rise with inflation — while any future rate relief is upside TOG does not underwrite.

Lowest Deliveries Since 2014

~1%

Of total industrial stock projected to be delivered in 2026 — less than half the long-term average.

↓70%

Supply deliveries versus the 2023 peak. Development starts remain near post-pandemic lows.

7%

National vacancy, peaked Q3 '25 — expected to stabilize near 6% by 2027.

Industrial completions in millions of SF. Source: Green Street Industrial Annual Sector Outlook, Jan 2026. Rent growth is projected to return to inflation-plus levels by 2027 as demand (1.5%/yr) outpaces new supply (1.2%/yr). Forecasts are third-party estimates and are not guarantees.

Industrial Real Estate at an Inflection Point

METRIC	2021	TODAY
Interest rates	3.0 – 3.5%	6.5 – 7.5%
Cap rates	4.0 – 5.0%	5.5 – 6.5%
Avg industrial rent (NNN)	$7 – $9/SF	$9 – $10/SF
Debt maturing (est.)	—	$220B+/yr

- **$220B+ in industrial debt maturing.** Loans originated 2016–2021 are coming due, forcing owners to refinance at higher rates or sell at distressed pricing.
- **Forced sellers create acquisition opportunity.** Overleveraged sponsors facing DSCR covenant breaches and margin calls will be compelled to sell — a window to acquire quality assets below replacement cost.
- **Fragmented ownership.** Infill owner-operators are traditionally small-scale, making them ideal counterparties for a veteran sponsor.

Assets financed at 2021 valuations now face refinancing at roughly twice the cost, with rents improving but debt loads unsustainable — the window for well-capitalized buyers. Sources: Green Street; TOG market observation.

Key Risks

An investment in industrial real estate involves risk, including the possible loss of capital. Key risks include:

Market risk. Demand, rents, and values can decline if the economy weakens, tenants contract, or new supply arrives. Infill locations with constrained land supply mitigate, but do not eliminate, this risk.

Interest rate risk. Rising rates can increase financing costs and pressure property values through higher cap rates.

Leasing risk. Vacancy, tenant default, or renewals below expectations can reduce income.

Execution risk. Repositioning and development can run over budget or behind schedule.

Leverage risk. Debt amplifies both gains and losses; a downturn can reduce equity value by more than the decline in property value.

Liquidity risk. Real estate is illiquid. An investor may not be able to exit quickly or at an attractive price.

Regulatory risk. Zoning, environmental rules, and warehouse regulation — including California AB 98 — can affect development and operations.

Next Steps

We would welcome a conversation. The path from here is straightforward:

1. Meet the team. A conversation with Douglas and Oliver O'Donnell to discuss the opportunity, the track record, and fit.

2. Review the data room. Detailed track record, deal pipeline, and underwriting for the current opportunity set.

3. Discuss structure. The form of the partnership, commitment, and terms — to be agreed together.

Contact. Douglas O'Donnell, Founder & CEO, The O'Donnell Group, Inc. — dod@odonnellgroup.com — +1 949 633 3684.
